Intelligent Glass. Measurable Impact.

ClearGlass Quantum-Neural Smart Glass

SPD · PDLC · AI DIGITAL TWIN · QUANTUM ENCRYPTION · NEURAL INTERFACE

PRODUCT OVERVIEW

ClearGlass Quantum-Neural Smart Glass unifies SPD and PDLC dynamic glazing with an IBM quantum-powered AI digital twin, quantum key distribution security, and Neuralink neural-interface control into a single, code-compliant facade system. Deployable across enterprise towers, healthcare campuses, and luxury EVs and residences, it delivers verified energy savings, instant privacy, and sovereign-grade data protection from day one. Procurement teams gain a future-proof platform that transforms real-estate and facility CAPEX into a strategic, ESG-auditable asset.

KEY OUTCOMES

35%	Portfolio energy reduction
40%	HVAC load reduction (healthcare)
5.5%	EV range improvement
<100ms	PDLC privacy switching
95%	Infrared blocked (SPD)
FedRAMP	IL4-equivalent compliance
HIPAA	Grade visual privacy
QKD	Quantum Key Distribution security

Enterprise

A Fortune 100 headquarters deploys ClearGlass across a 40-story facade—SPD blocks 95% of infrared during peak solar load while PDLC switches conference rooms to frosted privacy in under 100 milliseconds. The AI digital-twin engine continuously trims

Healthcare

Hospital networks leverage PDLC for instant HIPAA-grade visual privacy in patient rooms and operating theaters, while SPD zones support circadian recovery protocols and cut HVAC loads up to 40%. The AI sustainability engine generates auditable carbon ledgers

Consumer

Luxury EVs and high-end residences adopt ClearGlass for roofs, windows, and partitions —SPD tinting activates in 1–2 seconds, extending vehicle range up to 5.5%, while the AI digital twin learns occupant preferences and participates in utility demand-response

HVAC setpoints and predicts maintenance windows, targeting 35% portfolio energy reduction. Neural command and quantum key distribution satisfy FedRAMP IL4-equivalent requirements from day one.

that unlock green-bond financing. Patients with paralysis use neural implants to control tint and trigger therapeutic visual patterns while quantum encryption safeguards all biometric streams.

programs. PDLC layers double as projection surfaces for entertainment or work. Quantum-secured neural interfaces deliver hands-free zone control and verified carbon credits.

CORE TECHNOLOGY STACK

SPD Dynamic Glazing | PDLC Instant Privacy | AI Digital Twin (IBM Quantum) | Quantum Key Distribution | Neuralink Neural Interface | Carbon Ledger & ESG Audit
